Output 1: SRS Excerpt and GitHub Copilot Prompt

Output 2: AI-Generated User Stories and Acceptance Criteria

User stories and acceptance criteria

1. Log in

As a student, I want to log in using my registered credentials, so that I can use the library system.

Acceptance criteria:

- Given a student has registered credentials, when they enter those credentials, the system allows them to log in.
- The system uses the credentials entered by the student to determine whether they are registered.

2. Search for books and view availability

As a student, I want to search for books by title or author and view their availability, so that I can find books and see whether they are available.

Acceptance criteria:

- The student can search using a book title.
- The student can search using an author.
- The system displays availability for the books returned by a search.

3. Reserve available books

As a student, I want to reserve an available book, so that I can reserve a book I want to borrow.

Acceptance criteria:

- Given a book is available, when the student reserves it, the system completes the reservation.
- After a successful reservation, the system displays a confirmation message.

4. Receive a message when a book is unavailable

As a student, I want to be informed when a book is unavailable, so that I know it cannot be reserved as available.

Acceptance criteria:

- Given a book is unavailable, when the student attempts to reserve it, the system displays an appropriate message.
- The system does not report the reservation as successful when the book is unavailable.

Output 3: Completeness Evaluation

Completeness evaluation

SRS requirement	Covered by
Students log in using registered credentials	Story 1
Search by title or author	Story 2
View book availability	Story 2
Reserve available books	Story 3
Display confirmation after a successful reservation	Story 3
Display an appropriate message if a book is unavailable	Story 4

All requirements stated in the SRS are represented in the stories and acceptance criteria. The SRS does not define details such as exact message wording, invalid-credential handling, or search-result behavior when there are no matches; these are therefore not specified here.
